SUMMARY

Artificial Intelligence and Data Science graduate with knowledge of Python, SQL, Flask, Fast API, HTML, Machine Learning, and Deep Learning. Developed projects involving AI-driven healthcare monitoring, neural network-based plant disease prediction, and text classification. Currently learning Generative AI concepts including LLMs, RAG, Lang Chain, and AI Agents, with a passion for continuous learning.

EDUCATION

B. Tech Artificial Intelligence and Data Science

Anand Institute of Higher Technology

CGPA: 9.02

2022-26

Chengalpattu

HSC – Computer Science

St. Mary's Matriculation Higher Secondary School

Score: 83

2022

Chengalpattu

SSLC

St. Mary's Matriculation Higher Secondary School

Score: 85

2020

Chengalpattu

TECHNICAL SKILLS

- Python, SQL
- Flask, Fast API, HTML
- Machine Learning, Deep Learning
- LLM, RAG, AI-Agent, Langchain

ACHIEVEMENTS

- Python Certification – GUVI, Infosys Springboard
- AI & ML Workshop -GenrcasX, Codework
- Participated in Smart India Hackathon, MSME Hackathon

PROJECT

ADAPTIVE AI-AGENT BASED ENERGY MANAGEMENT FOR IoT-ENABLED HEALTHCARE MONITORING

- Developed an IoT-enabled healthcare monitoring system for real-time collection and tracking of patient health data, improving the efficiency of remote health monitoring.
- Implemented an adaptive AI-agent approach to optimize energy consumption and enhance the performance and reliability of connected IoT devices.
- Utilized Python, Machine Learning, IoT concepts, and data processing techniques to analyze system behavior and support intelligent resource management.

PLANT DISEASE PREDICTION USING NEURAL NETWORK

- Performed data preprocessing, cleaning, and exploratory data analysis on agricultural datasets to identify disease patterns and improve data quality.
- Developed a machine learning and neural network-based prediction model to classify plant diseases and support early detection.
- Utilized Python, Pandas, NumPy, Scikit-learn, and Neural Networks for data analysis, feature preparation, model development, and performance evaluation.

TOXIC TWEET DATA CLASSIFICATION

- Cleaned, transformed, and preprocessed social media text data to prepare datasets for Natural Language Processing (NLP) and machine learning tasks.
- Conducted exploratory data analysis and implemented classification techniques to identify and categorize toxic and non-toxic tweets.
- Utilized Python, Pandas, Scikit-learn, NLP techniques, and machine learning algorithms for text processing, feature extraction, and model evaluation.

INTERNSHIP

AI & Data Science

2025

Dvein Innovation

Chennai

Gained hands-on experience in Data Science, Machine Learning, and Deep Learning concepts, including data preprocessing, model development, and evaluation using Python, Pandas, and Pandas.

Machine Learning

2024

Arul Technology

Chennai

Gained hands-on experience in data preprocessing, model training, and evaluation while working on real-time ML tasks such as classification and prediction. Explored algorithms including Linear Regression, Decision Trees, and KNN in practical applications.
